Re: East Bixby Road Pavement Reclamation Project - UPDATE

Dear Resident:

I am writing to provide a Project Update:

- Pavement subgrade reclamation was undertaken between Sept. 5 and 6. Unfortunately, this process was delayed due to an unforeseen subsurface condition that altered the pavement design and affected our schedule. We appreciate your patience.
- On or around September 12, the City's contractor Strawser Paving Company will begin paving the roadway, weather permitting. Paving work, drive-apron repair, shoulder repair, and seeding will occur over the next two to three weeks thereafter.
- Residents that have driveways connected to Bixby Road between Ebright Road and US 33, in the project length, will have access to their properties during the work, but may experience some delay. All others should follow the detour to avoid the Work Zone during the road closure. The contractor will be required to post notifications to these residents, regarding drive apron repairs.
- When it is deemed safe, the roadway will be re-opened to through traffic. It is expected this may occur the last full week of September, weather permitting.
- From time to time, for project updates, please visit the City website for more information on the schedule, at www.groveport.org. Road closures will be shown on the website.

It is reiterated that weather and ground conditions may affect the schedule. Dates are approximate.

Questions may be directed to the City Municipal Building, office of the City Engineer at 614-836-5301.

Thank you.

Sincerely,
City of Groveport

Stephen J. Farst, P.E., CFM
City Engineer
