Ocean-Floor Adventure

Imagine yourself on a field trip crossing the ocean floor. What sights do you think you would see? Find out by following the directions below.

Directions: Each flipper describes an ocean-floor feature. Use the diagram to help you decide which feature is being described. Then write its corresponding letter on the flipper.

1. _____ a chain of mountains that runs through the three major oceans (most stand about 5,000 feet above the seafloor)

2. _____ a submerged area that rims the land, beginning at the shoreline and gently sloping underwater to an average depth of about 430 feet

3. _____ a mountain that breaks through the surface of the water

4. _____ a flat area of the ocean floor, covered with sand, mud, and plant and animal remains

5. _____ a steep-sided valley at the center of a mid-ocean ridge

6. _____ a long, narrow, steep-sided valley that forms the deepest parts of the ocean

7. _____ a steep drop-off from the continental shelf that plunges to depths of $2\frac{1}{4}$ miles

8. _____ underwater mountains formed by erupting volcanoes

Bonus Box: If the continental slope extends to a depth of $2\frac{1}{4}$ miles, how many feet deep does it plunge?
Hint: 5,280 feet = 1 mile
